

PRESS RELEASE

London, 7 February 2012

Greenergy named 2012 oil and gas sector leader by Forest Footprint Disclosure

Greenergy, the UK's leading supplier of petrol and diesel, was today named oil and gas sector leader by the Forest Footprint Disclosure (FFD). FFD encourages big business to recognise the impact of their use of "forest risk" commodities (biofuels, soy, palm oil, timber and cattle products) on the world's forests and to disclose their use of these commodities.

Announcing its third Annual Review, FFD said "Greenergy International Ltd, which led the [oil and gas] sector and was also one of the most improved companies overall in terms of the depth of their disclosure, demonstrates that it can be done and is leading the way for others to follow."

Greenergy Managing Director, Tamara Earley said "We believe fundamentally that disclosure drives improvement, and we're delighted to be recognised as sector leader for a second time.

"We have significantly reduced our use of crop-based biofuels by investing in biodiesel production from waste streams we were previously unable to use. For our remaining biofuels, we have worked with individual suppliers to obtain land use and carbon information, recognising that when we use the world resources for biofuels, we must do so responsibly. We have also used BioCarbon Tracker as a unique and engaging medium through which to explain the origin of our biofuels, and we encourage other businesses to follow our lead."

Other sector leaders recognised for the second consecutive year included British Airways, Drax Group, Marks and Spencer, J Sainsbury and Reed Elsevier.
